

## Globe Spinner Card

**Card Base:** Misty Moonlight Cardstock - 20.85 X 21cm. Score at 10.5. Don't fold in half yet!

Two strips of scrap cardstock about 4 X 1cm - You will use this to attach your thread to for the globe so it spins properly.

Whisper White - 10.5 X 14.3cm

**DSP:** World of Good DSP - I used the concentric circles and compass sheets  
Brass foil and Pretty peacock blue foil.

**Accessories:** Thread or something similar for globe.

**Dies:** World Map Dies and Stitched shapes dies

### Instructions

- Cut out both hemispheres from Brass foil and use the circle framelit in this set to cut the blue foil X 2. Glue foil to both globes and set aside. Do NOT glue them together yet!!
- Using the concentric circle DSP and the largest Stitched shape circle die, Cut the centre from the DSP making sure it is centred correctly. (I had to measure about 11cm- 5.5cm from either side of gold centre and cut remaining cardstock off to get it through my die cutting machine. I did not cut it the correct length at this stage.) This centre piece will go inside your card behind the globes.
- Temporarily stick the compass paper to the outside of card and using the same circle framelit, cut a circle in the middle of the front of the card. Remove DSP from card for now. (You might have to run it through a couple of time for a clean cut.)
- Fold your base front in half so it is an Z fold. Do the same with the DSP.

### To make Spinner

The diameter of the circle is about 7.5 so you need to use enough thread or twine for the spinner I suggest cutting it longer and then trimming it.

(The first time I made it I just taped the thread to the card base but found it slipped and became loose, so I wrapped the thread around the strips of scrap CS and secured it firmly. I then taped it with double sided tape on to the card stock on the outside of the card. This gets covered over by the DSP)

### Putting the Card together

- Once you have firmly attached the spinner thread to the outside of card, glue compass DSP on top of it - lining up centre hole.
- Unfold front of card place the concentric circle DSP on the inside, lining up the circles, so you can work out where it will go. Mark with a pencil and cut to size and then glue in place.
- Back inside - Glue a piece of the left over concentric circle DSP - other side with script - (13.9 X 9.5 cm) on to the Whisper White card stock and glue onto inside of card.
- Close card and work out where you will place your cut-out concentric circle centre. This is easiest done if you fold the card into Z shape again and place the

circle on the back section. Make sure you line up the lines. Finally glue the globe in place – both hemispheres back to back. The globe should fit perfectly over the centre of this cutout circle when it is closed.
